DESKTOPS ON DEMAND

▷ ▷ ▷ ▷ ▷ ▷

On Any Device, in Any Location, Streamed to your Web Browser

Provide your workforce on-demand, high-performance desktop workspaces, with secure access to their data, regardless of location or device. With Zero-Trust end-points and Data Loss Prevention (DLP) controls, your sensitive data stays safe, your network is malware free, while your team stays productive and connected.

Cost Effective

In an age where technology has become central to all business operations, providing secure, reliable, and efficient workspaces for employees is essential to saying "yes" to the business needs of your organization. Migrating to a DaaS solution with Kasm Workspaces significantly reduces your IT expenditure. By moving away from traditional desktop solutions, you avoid upfront hardware costs and reduce ongoing maintenance expenses. Kasm Workspaces can be scaled up or down to meet demand, and you only pay for the licenses and the compute that you use, making it a cost-effective solution for organizations of all sizes. Moreover, Kasm's devops-enabled automated updates reduced maintenance activities, resulting in lower total cost of ownership.

Streamlined Deployment

Kasm Workspaces lets you deploy virtual desktop infrastructure (VDI) with unmatched ease and agility to significantly streamline operations and enhance productivity. On-premise, Private Cloud and Public Cloud deployment options provide maximum flexibility for a technical architecture that supports your design requirements, including a hybrid configuration with workloads in both the datacenter and the cloud. Kasm Workspaces seamlessly integrates with your existing infrastructure and can be deployed in a single-server or multi-server configuration or deployed through automation using our open-source Terraform or Ansible projects. Whether you're already using cloud services or traditional on-premises servers, Workspaces empowers your team to stay connected and productive anywhere, anytime.

Robust Security

In the era of escalating cybersecurity threats, Kasm Workspaces offers an unmatched level of protection for your business operations. The platform adheres to stringent security protocols, ensuring all your business data remains confidential. With data encryption, regular system updates, and strict access controls, Kasm ensures your data remains secure, isolating each user's session to prevent cross-contamination and unauthorized access. Kasm supports integration with a variety of authentication providers, including LDAP, Active Directory, OAuth, and Two-factor authentication (2FA), providing a unified, easy-to-use platform. Data loss prevention (DLP) helps to prevent sensitive data from being leaked from Windows desktops

Unlimited Scalability

The beauty of Kasm lies in its limitless scalability. Desktop computing resources can be provisioned on-demand to dynamically grow to meet your workforce requirements and then scaled back down once demand has subsided. Whether you're a small enterprise looking for a simple DaaS solution or a large corporation seeking extensive virtual desktop management, the Workspaces platform grows with your business, eliminating the need for substantial capital investment in hardware and other resources.

Kasm Workspaces is the future of business operations, offering a comprehensive, secure, and scalable DaaS solution. It empowers businesses to be more flexible, productive, and secure, no matter their size or industry. Embrace the future with Kasm Workspaces – your Next-Generation Desktop as a Service.
